UD1. Activity 2

We need to create the first design of a website.

The client has specified the following:

- Their website will host a blog with opinion articles. Each article will contain a featured image and will have one or more assigned topics.
- Bloggers will have to register to be able to write articles. When logged in, bloggers will see only their own articles, not those of other bloggers. On this page, bloggers will be able to create, edit and delete articles. An article can be published or unpublished. Only unpublished articles can be deleted.
- Blog users will be able to mark in some way that they like an article.
- The home page will show the latest posts by default, although there should be an option to filter by topic and only show articles marked with those topics.
- There will also be a contact page with a form, giving a brief summary of the author(s) of the page;
- And a section with links to their social networks.

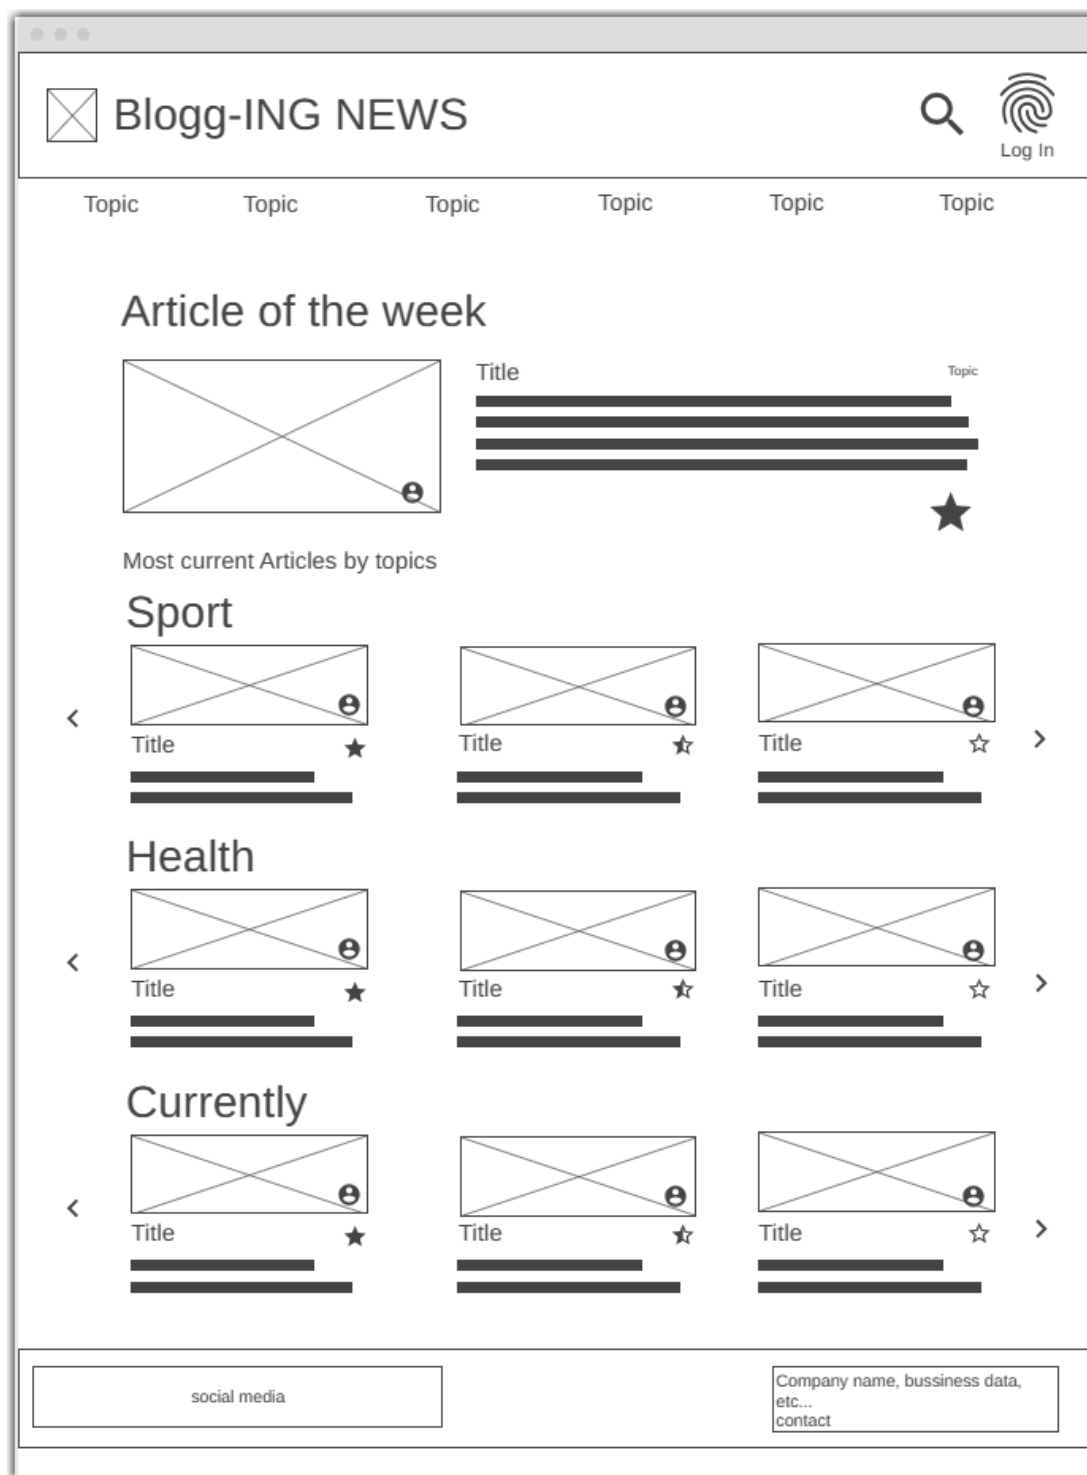

To do this first design we are going to make a wireframe for each of the pages we need, so first we need to analyse how many pages we need for this website. Remember that any design must always be responsive, so we will draw a wireframe for desktop and a wireframe for mobile for each page.

For the home page you have to explain why you have decided to draw it that way (according to what we have discussed about the composition of the website in the theory, section 1.3.4).

Contact page

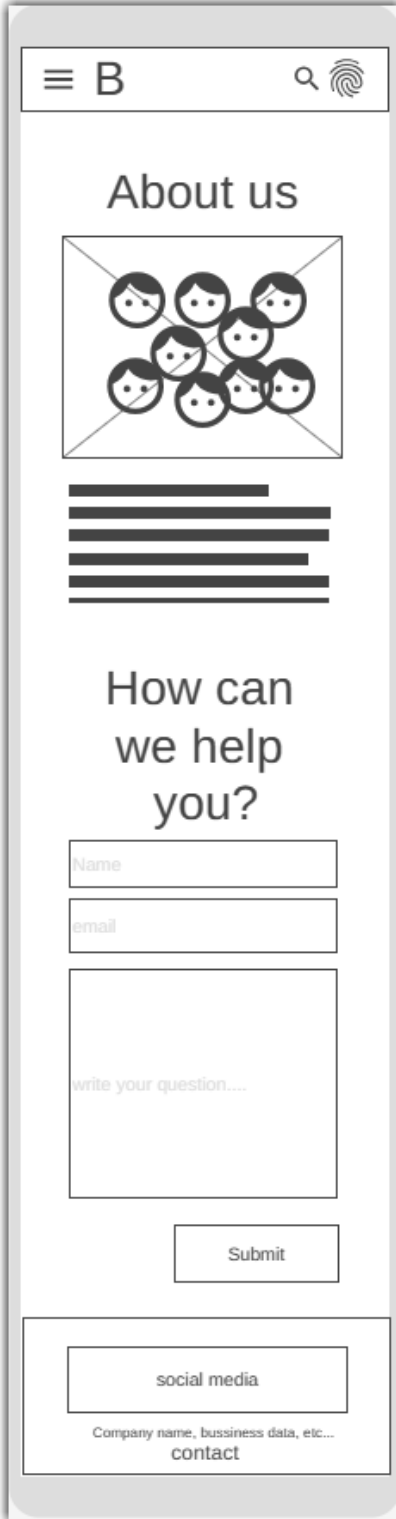

Desktop

The mockup shows a web browser window with a header bar. On the left of the header is a logo consisting of a square with an 'X' inside, followed by the text 'Blogg-ING NEWS'. On the right of the header is a search icon and a fingerprint icon with the text 'Log In' below it. The main content area has a section titled 'About us' with a placeholder image of a group of people and several lines of placeholder text. Below this is a section titled 'How can we help you?' with a form containing three input fields: 'Name', 'email', and a larger text area with the placeholder 'write your question....'. A 'Submit' button is located to the right of the text area. At the bottom of the page, there are two more input fields: one labeled 'social media' and another labeled 'Company name, bussiness data, etc...'. The browser window has a standard macOS-style title bar with three dots in the top left corner.

Mobile

Mobile app mockup showing a contact form with the following sections:

- About us**: A section with a group of stylized people icons and several horizontal bars representing text.
- How can we help you?**: A section containing a form with three input fields:
 - Name
 - email
 - A large text area with the placeholder "write your question...."
 Below the text area is a "Submit" button.
- social media**: A section with a "social media" label and a "Company name, bussiness data, etc... contact" label.

Annotations

- Header and footer are fixed. Navigations bars are always on top and bottom.
- You can go to home page from all pages clicling the company logo from main navigation bar.
- All pages have a homogeneous hierarchy with a consistent grid that manages all content.
- All pages have a responsive version for mobiles devices.

Home page pattern

Desktop

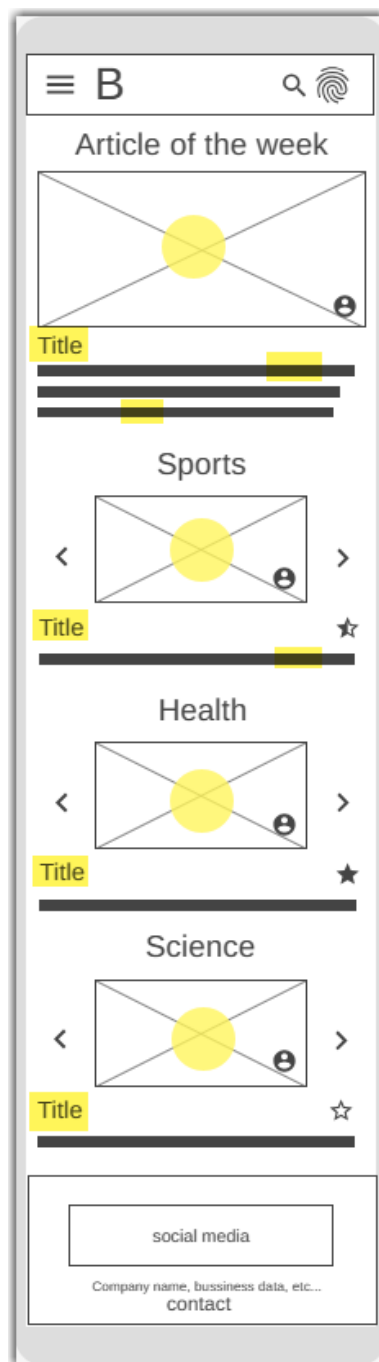

I have decided to use the **layer-cake pattern** because being a current news blog highlights the headlines and subtitles and maintains the same structure in all the summaries of each blog; Title, photo, summary of the content and words in bold. In this way, it is easier for the user to search for what interests him most and makes it more attractive.

	IES JOAN RAMIS I RAMIS Departament d'Informàtica Web interface design	UD1: Graphic user interface design principles CFGS DAW – 2nd course
--	--	---

Mobile

In the mobile version, it follows the same criteria but adapting it to the screen in a responsive way

Requirements

Their website will host a blog with opinion articles. ¹ Each article will contain a featured image and will have one or more assigned topics.

	IES JOAN RAMIS I RAMIS Departament d'Informàtica	UD1: Graphic user interface design principles
	Web interface design	CFGS DAW – 2nd course

1 Bloggers will have to register to be able to write articles. **2** When logged in, bloggers will see only their own articles, not those of other bloggers. On this page, bloggers will be able to create, edit and delete articles. An article can be published or unpublished. Only unpublished articles can be deleted.

1
 You can log in and/or register through a modal by clicking on the Login icon found in the navigation bar.

Blog users will be able to mark in some way that they like an article.

You can indicate that you like an article by clicking on the star

Desktop

Mobile

	IES JOAN RAMIS I RAMIS Departament d'Informàtica	UD1: Graphic user interface design principles
	Web interface design	CFGS DAW – 2nd course

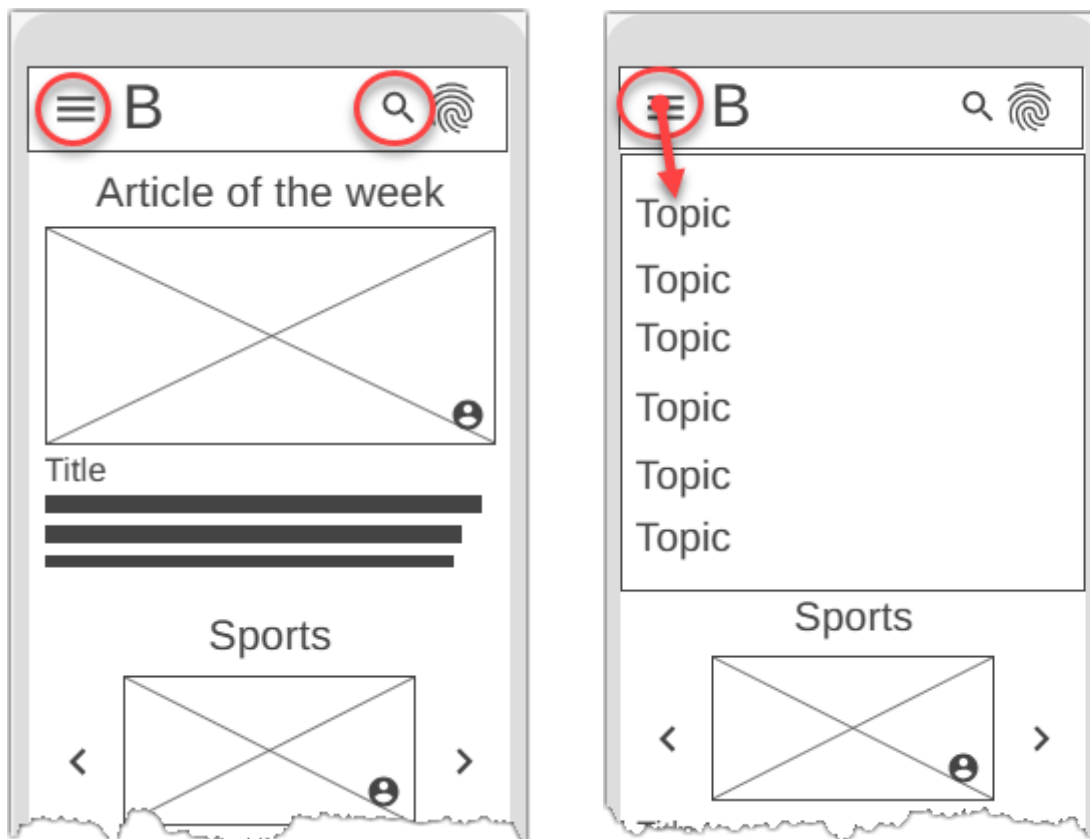

The home page will show the latest posts by default, although there should be an option to filter by topic and only show articles marked with those topics.

Below the main bar, there is another more minimalist bar that filters by topics when you click on one of them. There is also a button to filter by any text..

There will also be a contact page with a form, giving a brief summary of the author(s) of the page;

In the footer there is an option to contact the authors of the website using a form.
